Status of application

Acknowledgement is made of amendment filed Dec. 09, 2004. (Preliminary amendment firstly filed Feb 19, 2002). Since first non-final office action mailed June 7, 2004 is prepared by the original claims filed 10/7/02, but failed to consider the preliminary amendment filed before the first non-final office action, the said non-final office action is withdrawn hereinwith. However, restriction is necessary because there is a lack of unit existing between the patentably distinct inventions of groups I-IV.

PCT-national stage

1. Restriction is required under 35 U.S.C. 121 and 372.

This application contains the following inventions or groups of inventions which are not so linked as to form a single general inventive concept under PCT Rule 13.1.

In accordance with 37 CFR 1.499, applicant is required, in reply to this action, to elect a single invention to which the claims must be restricted.

Group I, claim(s) 25-38, drawn to a solid wound healing formulation comprising fibronectin.

Group II, claim(s) 39-42, drawn to a method of treating a wound using a formulation of group I.

Group III, claim(s) 43 and 45, drawn to a method of producing a wound healing promoter delivery system comprising the steps as recited in claim 43, wherein the steps including a concentration of fibronectin and a solution of an anionic polysaccharide.

Art Unit: 1618

Group IV, claim(s), 44 and 46, drawn to a method of producing a solid wound healing promoter delivery system comprising the steps as recited in claim 44, wherein the steps including a concentration of fibronectin and a solution of an alginate salt and a glacial acetic acid.

Lack of Unity(PCT-Restriction)

1. the special technical feature which is referred to Annex B of Appendix A1 of the MPEP(Administrative Instructions under the PCT, "Unity of Invention"). Unity exists only when there is a technical relationship among the claimed inventions involving one or more of the same or corresponding claimed technical features. The express "special technical features" is defined as meaning those technical features that define a contribution which each of the inventions, considered as a whole, makes over the prior art."(Rule 13.2). In this case, the technical feature is fibronectin. The question of unity of invention has been reconsidered retroactively by the examiner in view of the search performed; a review of US 5641483(Beaulieu) or US4973466 (Reich) makes clear that the claimed species(i.e. fibronectin) is not novel over the prior art (the instantly claimed compounds). Furthermore, these references appear to demonstrate that the claimed technical feature does not define a contribution which each of the inventions, considered as a whole, makes over the prior art. Accordingly, the prior art of the record supports restriction of the claimed subject matter in to the groups as mentioned immediately above.

Conclusion

1. No claim is allowed.

Art Unit: 1618

2. All pending claims are subject to restriction/election requirement.
3. It is noted that the restriction requirement is necessitated by amendment filed Sep. 8, 2004. 37 CFR 1.142(a), second sentence states: " if the distinctness and independence of the invention is clear, such requirement will be made before any action upon the merits however, it may be made at any time before final action in the case at the discretion of the examiner.". Thus, the instant restriction requirement is considered to be proper in timely manner.
